

**CEDARS-SINAI MEDICAL STAFF
and CEDARS-SINAI ALUMNI ASSOCIATION**

Cordially invites doctors, residents, healthcare professionals and
the general public to an extraordinary program devoted to

ART and MEDICINE
Michelangelo's Sculptures: How He Manipulated Anatomy

by
ROBERT KLAPPER, MD
Chief of Orthopedic Surgery
Cedars Sinai Medical Group
Formerly Columbia College graduate majoring in Art History

DR. KLAPPER, a graduate of Columbia University's Medical School, pursued a career in orthopedic surgery. His creative approach to studying medicine led to multiple patents for specialized tools used in hip and knee surgery all over the world. As an orthopedic surgeon and art historian, his love for discovering the secrets of how the body works was fueled by his continued passion for sculpture -- with annual visits to the quarries of Carrara to unlock the secrets of Michelangelo's ability to convey complicated human emotions through his intentional manipulation of human anatomy.

The lecture will allow the audience to understand a journey where art and medicine together reveal the secrets of the human condition.

Following an intermission with light refreshments, a documentary film on Michelangelo - the Titan Sculptor, Painter, Architect - will be shown. A Q&A Session will end the program.

WEDNESDAY, SEPTEMBER 17, 2014
6:00 PM – Registration; 6:30 PM – presentation
CEDARS-SINAI MEDICAL CENTER
HARVEY MORSE AUDITORIUM - PLAZA LEVEL
OPEN TO THE GENERAL PUBLIC
ADMISSION
